I am coding along with these courses, all my work can be found at my github, link in my website (link on left, go to projects)

13-20

- CEO & Founder @ EasyIT.
IT manager / freelancer.
In my job I gave Server support, did active directory installations, user configurations, sql server instances installs/backup, maintenance, management and clustering.
Fault tolerance installations.
DRP planner and executor.
Network & system management.
Penetration testing.
Many of my projects were abroad, and at my peak I had 2 IT guys to help me, one with me abroad and 1 here at home.
Among my clients you can find :
IDF, MER, Microsoft, and many more private and small businesses.

10-12

- IT manager\CTO + partner @ Triotech Tel aviv, managing 6 employees that give day to day support in classic client server

Sderot Yehudit 31

Tel Aviv, Israel

applications, new and fresh installs, maintenance and security concerns.

Employees were hired by me, after interviewing with the CEO and myself.

I've managed 80 SMB clients at this position in all aspects of IT, including, firewalls, server maintenance, workstation maintenance performance tuning and logs extraction.

09-10

- CTO and advisor to the CEO @ ITEXpress, Johannesburg, South Africa.

In my job I've managed a team of 6 IT support personnel.

The job included classic server/client support + installations and design documents with documentations.

Most of the work was onsite, my desk was the escalation desk.

The job also included navigating with local Hp Microsoft, Eset, IBM offices for support etc.

08-09

- Field Engineer @ the deployment team @ Comverse's EMEA section.

In my job I've installed, implemented and supported Insight 3 systems at clients locations all around the world, while dabbling with Unix/Solaris, Windows servers, Linux machines etc.

Some of my main clients included:

- Vodacom South Africa.
- PTC Telecom Poland.
- Thome, Tmobile, Germany.
- Pelephone, Israel.

06-07

- Network & System Security expert @ Multilayer Security.

In my job I managed the Imperva Application Security department. This department installed, configured, maintained and outputted logs from our Secure sphere installations @ customers sites (FIBI, Leumi, Poalim, Department of Defense, IDF, Microsoft, and many more).

The job was all about spotting abnormalities in data sent to and from the local machines on the networks, while all the data passed through our Imperva secure sphere firewalls, and we would go

back to the offices, analyze the Sql injection, and cross site-scripting attempts and so on, afterwards we would return and try some Penetration testing to evaluate our work.

The job also included writing sophisticated documents from documentation to proof of concepts to complete design documents.

01-05

- Sys Admin / Network Manager @ EDS ("Electronic Data Systems") @ Hermesh project by Bank Leumi.

In my job I've supported 700 users in all IT aspects, server related, dev environment, network and troubleshooting.

I managed a team of 5 employees which I've interviewed and hired, the team were IT professionals giving users day to day support, (Active Directory, BMC Patrol, Windows servers, Linux machines, Unix servers, Windows machines, package creation with Wise and SMS as a mega package installer, Rational Clear case as a version manager, etc), while escalations arrived at my desk.

The team managed 500 virtual servers and 30 physical ones at our HQ.

00-01

- Sys Admin @ Comverse's startup "Star Home".

At my job I've supported the users of the organization in all tasks client/server related, dev support, vpns support, building and maintaining dev environments from scratch, servers and local clients, basic tutoring etc.

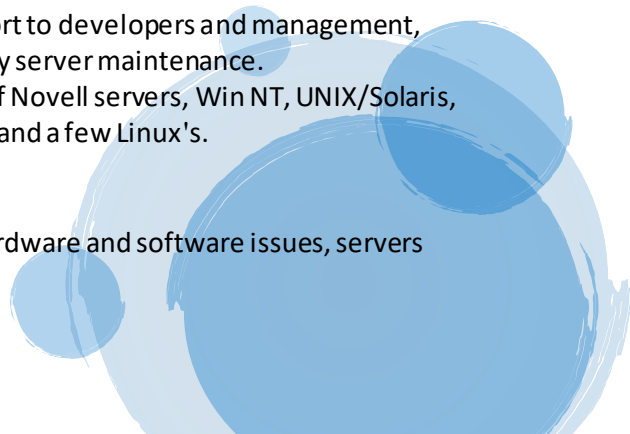

I've also maintained the firms firewalls and entry points, as well as all of the system and security aspects.

99-00

- System support in Calanit Carmon, my job was @ the Pelephone HQ in Givataim where I supported the building users in the team known as "5,5"
- The job was mainly IT support to developers and management, script writing and day-to-day server maintenance.
- Support included all kinds of Novell servers, Win NT, UNIX/Solaris, Win 2k, windows machines and a few Linux's.

97-99

- Tech support freelancer, hardware and software issues, servers

and databases.
